

New Product Announcement from Times Microwave...

SilverLine™ TuffGrip Adaptor

Introducing a new 7-16 bullet adaptor from Times Microwave Systems designed to facilitate RF testing at the cell tower top. Current adaptor designs are small, making them difficult to handle particularly with gloves in cold weather, and are easily lost or dropped. The new Times TuffGrip Adaptor (stock code 3191-291) 7-16 female bullet adaptor features the patented TuffGrip handle which provides a secure way to grip the device during use. It has superior RF characteristics through 6.0 GHz and is manufactured from 100% stainless steel. The rugged adaptor has a stainless steel ring for attachment to a tool belt with a carabineer hook. The adaptor also comes equipped with attached, heavy-duty end caps to protect the 7-16 interfaces.
